Education:

University of Illinois Chicago
Bachelor of Science in Computer Science

Expected Graduation: May 2027
GPA: 3.92/4.00

Coursework: Data Structures, Computer Algorithms, Software Engineering, Machine Learning

Skills:

Languages: Java, C++, Python, C#, TypeScript	Testing: JUnit5, Google Tests, NUnit
Front-End: React Native, JavaFX, Unity UI	Paradigms: OOP, Declarative, Event-Driven
Data Analysis: SQLite3, CSV Processing, matplotlib	SW Engr: Agile Development, Scrum, Design Patterns

Employment History:

AI Research Intern | Power Energy Innovation Lab, UIC

Jul 2025 - Aug 2025

- Developed an AI model for differential power transformer protection
- Synthesized research papers on neural networks and transformer protection to inform model design
- Applied computer science methods to interdisciplinary problems in electrical engineering

Teaching Assistant | College of Engineering, UIC

Aug 2026 - Present

- Led weekly classes and discussions to help first-year students become familiar with UIC resources and campus culture
 - Designed a career-readiness assignment introducing students to job preparation, UIC academic material, and essential CS terminology
-

Project History:

Magic Missile Wizard Duel Game

Feb 2026 - Apr 2026

- Built a multiplayer video game prototype in Unity Engine and C# as part of a 4-person Agile team, implementing requirements drawn from a formal design report
- Applied software design patterns to produce a scalable, maintainable codebase and validated requirements through unit testing and code inspections
- Managed Agile sprint cycles using Git for version control and Jira for sprint planning, producing implementation reports and summaries for each sprint

Chicago Traffic Camera Analysis

Sep 2025 - Oct 2025

- Extracted and visualized Chicago traffic camera data using Python scripts with SQLite3 queries and matplotlib
- Architected the application using the Model-View-Controller design pattern to improve separation between data, UI, and control flow
- Converted raw CSV datasets into SQLite3 databases to enable structured querying and analysis

Personal Portfolio Website

May 2026 - Jun 2026

- Built and deployed a personal portfolio website using TypeScript and React, showcasing projects and technical experience
- Configured continuous deployment to Vercel directly from the project repository
